ARCHITECTURE DOCUMENTATION GUIDE

How do I find the right architecture detail?

The Proposed V3 architecture is drawn at five levels. Start at the top and zoom in. Each level answers one kind of question for one kind of reader, and every document sits under exactly one parent.

FIVE LEVELS — WHAT EACH ONE TELLS YOU

LEVEL	DOCUMENT	IT TELLS YOU	WRITTEN FOR	YOU WILL NOT FIND
L0	**Atlas**	Where to find the document you need: the hierarchy, IDs, titles and status.	anyone	system design
L1	**Overview**	Who the platform serves, the business capabilities, the external systems, and which country or region things run in.	everybody	service internals, protocols, schemas
L2	**Architecture**	How the platform is structured, and which technologies are selected and why.	architects, leads, ops	subjects, payloads, permissions
L3	**Concern views**	How one concern works — for example messaging, security, data or observability.	specialists in that concern	unrelated concerns
L4	**Detailed designs**	The contracts, flows, schemas, permissions and deployment specifications needed to build one design.	implementers	the full system landscape again

ONE REAL BRANCH — FOLLOW A QUESTION DOWN

LB-V3-L1-01
System and Platform Overview
Who uses it, for what, where?
AVAILABLE

→

LB-V3-L2-01
Logical and Technical Architecture
How is it constructed?
AVAILABLE

→

LB-V3-L3-10
Observability
How does observability work?
PLANNED

→

LB-V3-L4-02
Distributed Tracing with OpenTelemetry
What exactly do we build?
AVAILABLE

The levels branch. **L2-01** has a sibling, **L2-02 Technology Selection**, and twelve L3 children such as **Messaging / NATS**, **Data** and **Multi-Region**. A detailed design develops one concern of its parent. A parent may still be PLANNED.

L4 IS

L4 turns one architectural concern into an implementable design. Each document defines the relevant contracts, interactions, data structures, permissions or deployment details, and makes unresolved choices explicit.

REQUIREMENTS
What must be addressed
Each document has a register. Every requirement has an ID.

ARCHITECTURE VIEWS
How it is designed
The drawings at L0 – L4. One question each.

ADRS
What was decided, and why
A separate log, not a level. One decision can govern any level.

EDITIONS
One document, three forms
HTML drawing, PDF print, and optional prose page.

HOW FAR TO TRUST WHAT YOU READ

PLANNED
Catalogued. Nothing to review yet.

DRAFT
Reviewable, but not accepted or not complete.

AVAILABLE
HTML and PDF match and passed validation.

SUPERSEDED
Kept for history. Links to its replacement.

Status is about the document being ready, not about every decision in it being approved. **"Directional"** on a sheet means a first-pass position, dated, with each provisional item marked and any missing ADR shown.
