PROPOSED LINEBOOKER V3 ARCHITECTURE · LB-V3-L0-01 · LEVEL 0

Architecture Atlas

A graphical table of contents for the Linebooker V3 architecture. Start here to find the smallest diagram that answers a question: L1 establishes the stakeholder landscape, L2 explains the logical construction, L3 isolates architectural concerns, and L4 records implementable designs.

Navigation rule. Follow the tree until the diagram answers the question at hand; stop before unnecessary implementation detail. Solid blue denotes an available linked document, solid amber a draft, and dashed grey a catalogue commitment rather than a completed design. In the HTML edition, select any solid card to open that document.

PURPOSE	**L0 is an architecture atlas.** It is a graphical table of contents and document-status map, not a technical architecture view.
START	**Begin with L1.** It introduces actors, participating organisations, applications, logistics capabilities, shared platform concerns and regional placement.
ZOOM	**Levels increase detail.** L2 explains construction, L3 isolates one concern, and L4 provides implementable contracts and designs.
STATUS	**Visual treatment carries status.** Blue solid cards are available, amber solid cards are draft, and grey dashed cards are planned. A superseded state is added when a document is first replaced.
LINKS	**Available cards are navigation targets.** HTML cards link directly to documents; the PDF remains a distributable index with stable IDs and titles.
IDS	**Stable IDs prevent ambiguity.** Use LB–V3–Lx–nn when discussing, linking, superseding or reviewing a document.
SCOPE	**Each document answers one primary question.** New diagrams are registered here without turning L0 into a mega-diagram.
AVAILABLE	**Two documents sit at L2.** They branch by question, not by concern: L2-01 answers how the platform is constructed, L2-02 answers which technologies are selected and why. Splitting L2 by concern is L3's job.

KEY

- **Green card** — the atlas itself, the navigation root
- **Dashed grey card** — PLANNED: catalogued, no document yet
- **Dashed grey arrow** — zoom: the child adds detail to the parent
- **Solid blue card** — AVAILABLE: HTML and PDF exist and passed validation
- **Coloured band** — one level of the hierarchy, L1 to L4
- **LB-V3-Lx-nn** — the stable document ID; never renumbered or reused
- **Solid amber card** — DRAFT: reviewable, not yet accepted
- **Solid blue arrow** — start here, the entry route into the set
- **No superseded cards yet** — that state appears when a document is first replaced

ACRONYMS

ADR Architecture decision record
API Application programming interface
HTML The editable source edition of a document
KV Key/value store (NATS KV)
L0–L4 Architecture detail levels, atlas to detailed design
LB–V3 Proposed Linebooker version 3
MFE Micro-frontend
NATS The messaging system; a product name, not an abbreviation
PDF The distributable edition of a document
SVG Scalable vector graphics, the drawing format

Catalogue baseline: proposed Linebooker V3 architecture discussion and the maintained L1 system overview. Planned nodes indicate intended viewpoints and may be refined as requirements mature.
